Advanced Landed Cost / Duty Tracking & Calculation / Container Tracking

Information Integration Group, Inc. (IIG) is a leading provider of Industry Specific Advanced Distribution for small to mid-sized companies since 1991.

Advanced Landed Cost/Container Tracking allows you to enter container information for your purchases while they are still in transit from the vendor. One Landed Cost Transaction can be generated for multiple vendors and purchase orders. Advanced Landed Cost, integrated with your Sage ERP MAS 90, and MAS 200 systems, will automatically calculate cost increases related to shipping and importing, and add them to your inventory valuation in a single step. Advanced Landed Cost will also help you plot your course, in two ways. It allows you to add transportation-related costs to the value of goods in transit as soon as the goods are in a hull, gaining you important lead time for price updates; and it allows you to monitor shipping information as your goods approach their port of entry.

Advanced Landed Cost, integrates with your Sage ERP MAS 90, MAS 200 system and will automatically calculate cost increases related to shipping and importing, and add them to your inventory valuation in a single step. Advanced Landed Cost takes on another tough step for you; it allows you to select line items from as many different purchase orders as needed, and collect them into a single Receipt of Goods Entry. All you have to do is select the line items, and Advanced Landed Cost will do the work.

Advanced Landed Cost will assist you with your import documentation by creating your International Import Report for U.S. Customs auditing.
