Installation Instructions and Cautions

PLEASE NOTE: SAGE 100 ERP must already be installed on your system before installing any IIG enhancement. If not already done, perform your SAGE 100 ERP installation and setup now; then allow any updating to be accomplished automatically.

Once SAGE 100 ERP installation and file updating is complete, you may install your IIG enhancement product by following the procedure below.

Wait! Before You Install – Do You Use CUSTOM OFFICE?

THIS IS AN IMPORTANT CAUTION: If you have Custom Office installed, **and** if you have modified any SAGE 100 ERP screens, you must run **Customizer Update** after you do an enhancement installation.

But wait! BEFORE you run **Customizer Update**, it is very important that you **print all of your tab lists**. Running **Customizer Update** will clear all Tab settings; your printed tab list will help you to reset your Tabs in Customizer Update. **Custom Office** is installed on your system if there is an asterisk in the title bar of some of the screens. The asterisk indicates that the screen has been changed.

An **asterisk** in a window's title bar indicates that the screen has been modified. This means that **Custom Office** is installed.

Follow all the instructions on this page before you run **Customizer Update!**

Registering IIG products

IIG Enhancement should be registered to be able to use it. If registration is not performed, the enhancement will work in a demo mode for a limited time period. The registration can be still done during the demo period.

Select the **IIG Product Registration** program under the **Library Master Setup** menu of the SAGE 100 ERP.

If this option is not listed under the Library Master Setup menu, go to the main menu, and select **Run** from the **File** menu. Type in SVIIGR and click **OK**.

Enhancement	Level	Release Date	Serial Number	Unlocking Key
IIG Enhancement	5.10		AAAAAAAAAAAAAAAA	BBBBB

Enter **Serial Number** and **Unlocking Key** provided by IIG, and click **OK**.

If multiple IIG Enhancements are installed, Serial Numbers and Unlocking Keys should be entered for each enhancement.

Use the **Print Registration Form** button to print IIG Registration Form.

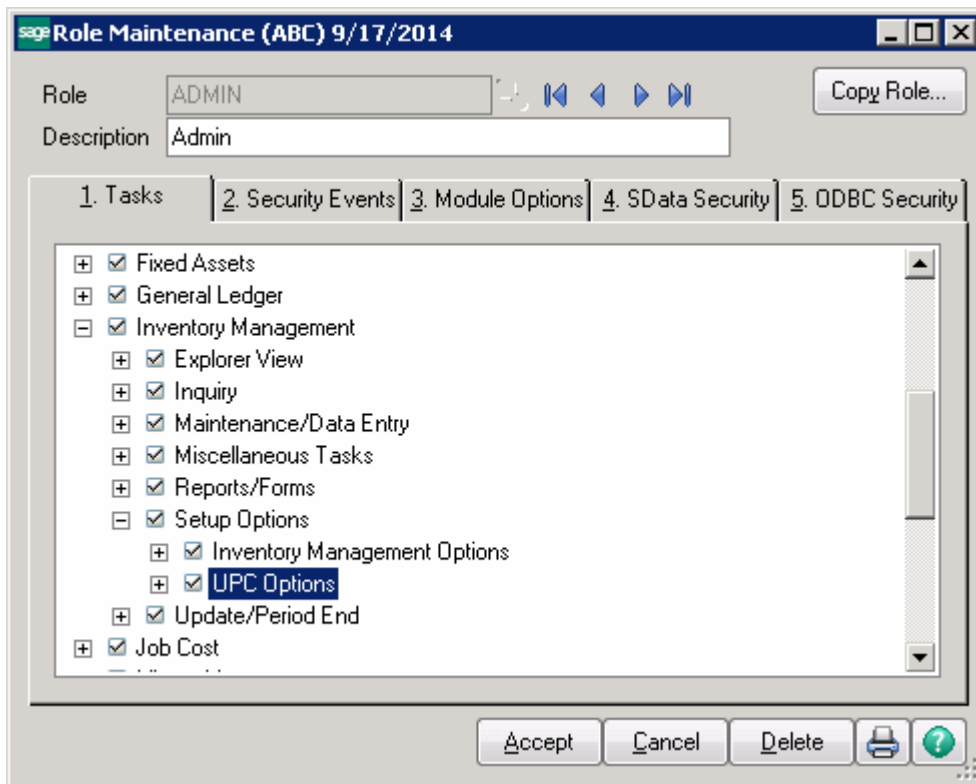

ODBC Security

After installing an **IIG Enhancement**; it is **very important to verify** whether or not the **Enable ODBC Security within Role Maintenance** check box is selected in the **System Configuration** window of your system. If it is selected you must assign ODBC security permissions and allow access to custom data tables/fields for the Roles defined in your system.

Role Maintenance

After installing an **IIG Enhancement**, permissions must be configured for newly created Tasks and Security Events.

Introduction

The **UPC** enhancement enables assigning Universal Product Codes (UPC) to items and recognizing items by UPC.

You can choose your system to work with either of these codes: UCC-12, EAN/UCC-13, EAN/UCC-14.

This enhancement checks the UPC codes to be unique throughout the system.

UPC codes can be assigned to each item manually or to group of items automatically.

UPC Options

The **UPC Options** program has been added under the **Inventory Management Setup** menu.

The screenshot shows the 'UPC Options' dialog box. The 'UPC Code Type' is set to 'UCC-12'. The 'Allow Only Selected Type' checkbox is unchecked. The 'Enforce UPC is unique', 'Allow for Components', 'Use UPC Codes by U/M', and 'Generate ITF-14 Codes for U/M' checkboxes are all checked. The 'Use UCC' checkbox is checked. The 'UCC Code' field contains '000000001' and the 'UPC Next Auto Item Reference' field contains '000020'. There are 'Manual', 'Accept', 'Cancel', and a printer icon button at the bottom.

The **UPC Code Type** determines the default length to be used for the code – 12, 13 or 14 digits. The available options are UCC-12, EAN/UCC-13, EAN/UCC-14.

Check the **Allow Only Selected Type** box to force the programs to reject UPC Codes of the lengths different from the selected.

Generally, if the **Allow Only Selected Type** box is cleared, the enhancement uses 14 digits for UPC Codes. If the entered UPC Code is 13 or 12 digits long, the program adds one or two zeroes correspondingly to the beginning of the Code. The default length determines possible **UCC Code** and **Item Reference** combinations.

Changing the **Allow Only Selected Type** option after using the UPC Codes in the system, can lead to problems after rebuilding the data connected to the already entered and used UPC Codes.

Check the **Enforce UPC is unique** box if you want the program to not allow assigning already existing UPC Codes.

Note that if this option is selected after entering a number of UPC Codes, the program will start checking if the Code has already been assigned only for the newly entered Codes. Hence, there might remain duplicate UPC Codes in the system.

Check the **Allow for Components** box to allow assigning UPC Codes to components of Kits/Bills of Materials.

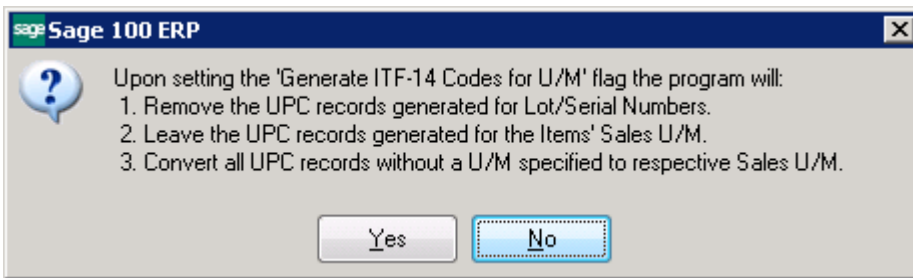

The **Use UPC Codes by U/M** checkbox, when selected, allows processing separate **UPC codes** by each **U/M**.

Generate ITF-14 Codes for U/M checkbox is intended for enabling/disabling generation of ITF-14 (UPC Shipping Container Symbol) codes. For generation of ITF-14 codes the program uses the same UPC Code as the base Item and prefixes the code with packaging indicator. If this option is turned on the Tare Type column becomes available in the UPC Code Maintenance to allow specifying the packaging type for ITF Code generation. Refer to [ITF-14 Processing](#) for details.

In order to use this options it is necessary to have **Allow Only Selected Type** option unchecked in the UPC Options, otherwise the following message appears upon selecting the checkbox.

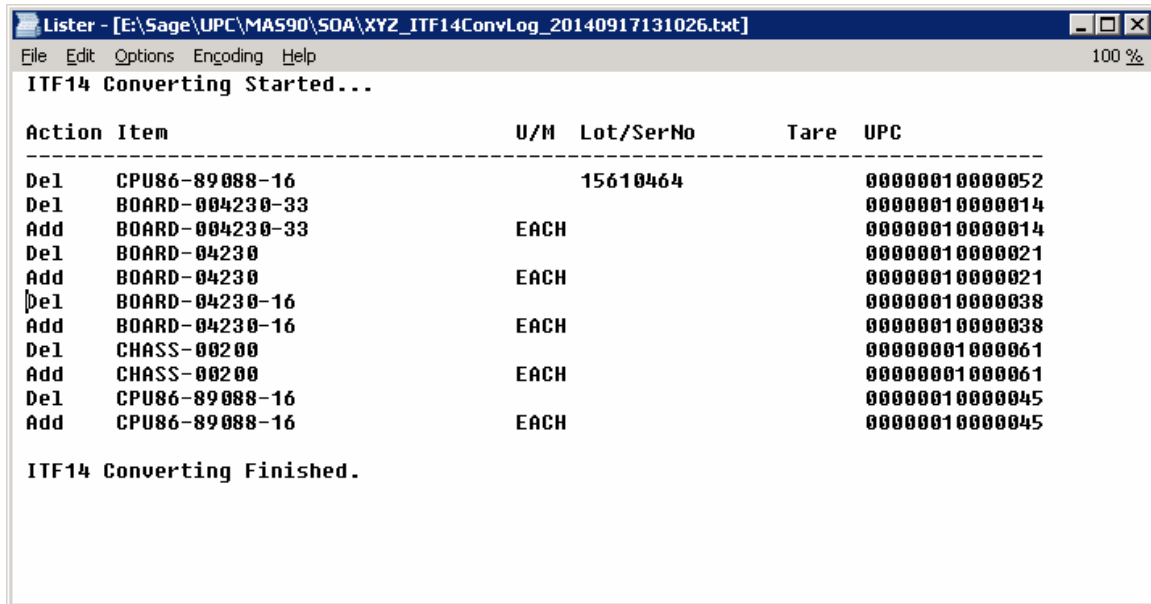

If there are UPC Codes already generated in the system the following message will appear upon enabling the ITF-14 code generation option:

Selecting Yes will proceed with UPC records rebuilding:

The Log file (XYZ_ITF14ConvLog_20140917131026.txt) created in the SOA folder provides with detail information for each Item processed:

Check the **Use UCC** box, if your company manufactures inventory rather than purchasing and selling finished goods.

The **UCC Code** is the company code, which will be used as the default for the part of the UPC codes. The **UCC Code** cannot be shorter than 6 digits.

The **UPC Next Auto Item Reference** is for adding to the **UCC Code** for assigning UPC Codes automatically in the **UPC Code Maintenance** program. The **Item Reference** cannot be shorter than 2 digits.

The sum of the **UCC Code** and **Item Reference** lengths is equal to the length of the **UPC Code Type** selected (12, 13, or 14).

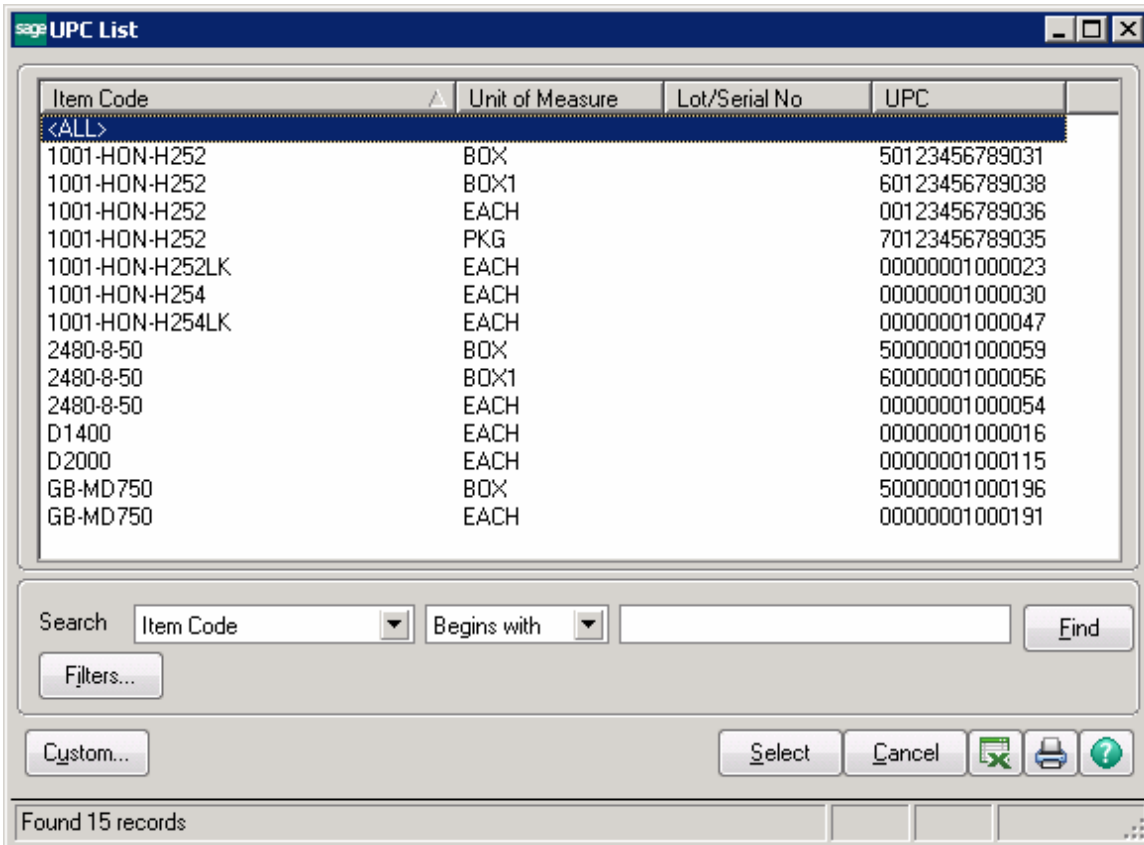

UPC Codes

The **UPC Code Maintenance** program under the **Inventory Management Setup** menu allows for assigning UPC Codes to the selected items and reviewing all the UPC Codes in the system.

The screenshot shows a software window titled "UPC Code Maintenance (ABC) 9/17/2014". The window contains a "Selection" section with an "Item Code" input field, a magnifying glass icon, and an "All" checkbox. To the right, there is a "UCC" section with "UCC Code" (000001) and "Auto Next No." (00020) input fields. The main area is a table with columns "Item Code", "Unit Of Measure", and "UPC". The table is currently empty. At the bottom, there are buttons for "Auto", "Accept", "Cancel", "Delete", and a printer icon.

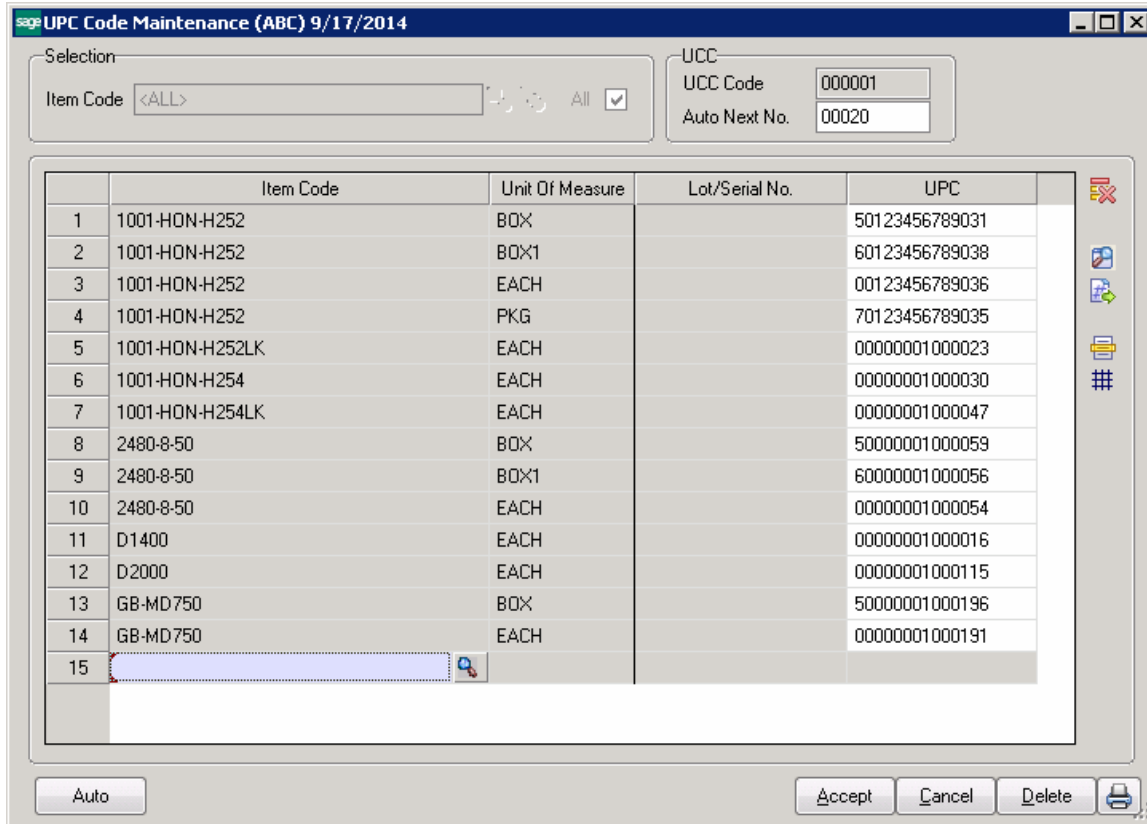

To add an item to the list, enter the **Item Code**, or select it using the **Lookup** button.

Press the  Lookup button to list Items with UPC codes already assigned.

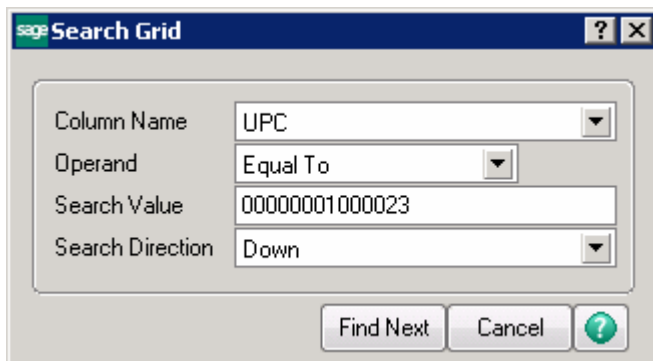

Press the  Flashlight button to list all Inventory Items.

Upon selecting **All** checkbox, all Items having UPC code assigned are loaded in the grid. After the Items are loaded in the grid the user can add new Items and assign UPC code.

-  -Delete Row button allows deleting the selected row.
-  - Find Row button allows for searching a row in the Search Grid window.

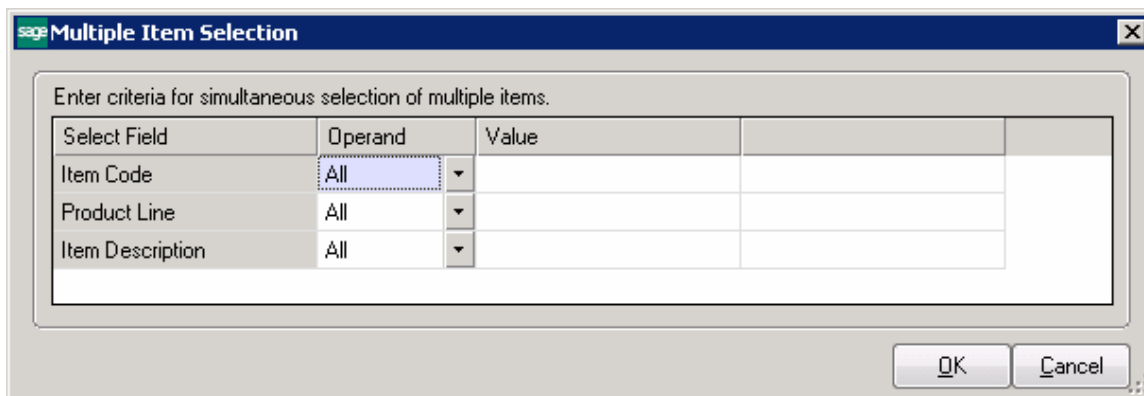

Upon pressing **Find Next** respective row in the grid is highlighted.

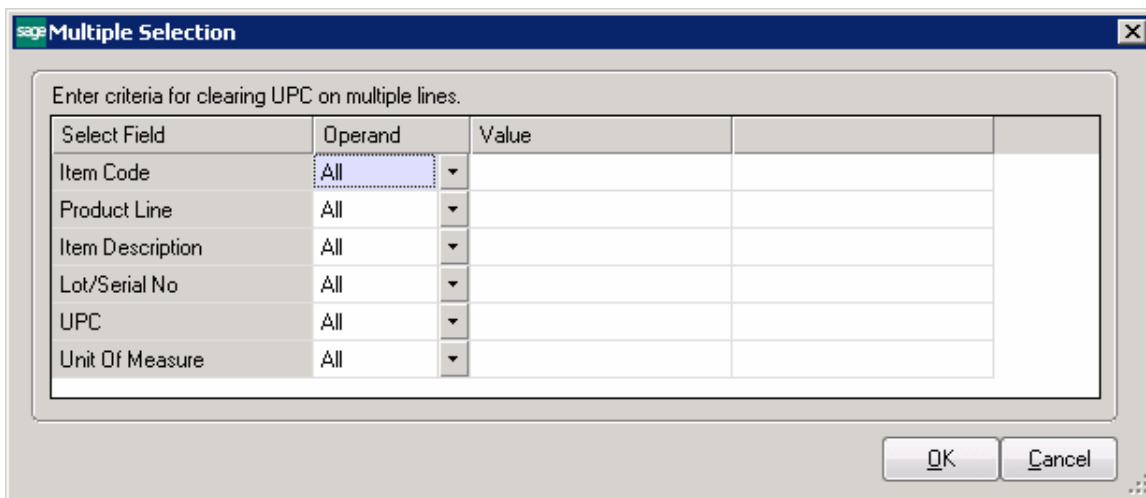

- **Assign UPC, Alt-X** button allows for assigning a UPC Code to the selected line.

- **Multiple Item Selection**- allows for adding in the grid multiple Items at once. Upon pressing this button Multiple Item Selection screen is opened allowing the user to add Items by certain selection criteria.

- **Multiple Selections for UPC Clearing.** This button allows for deleting UPC codes only for Items meeting certain selection criteria.

The **UCC Code** and **Auto next No** fields are available only if the **Use UCC** option is checked in the **UPC Options**.

The **UOM** column is available only if the **Use UPC Codes by U/M** checkbox is selected in the **UPC Options**.

Upon unchecking the **Use UPC Codes by U/M** box in the **UPC Options** screen, the following dialog appears:

Click **Yes**, if you want to delete all **UPC codes** by **UOM**. When clicking **No** the **UOM** field is hidden in this screen.

Component of a Kit or Bill of Materials cannot be assigned UPC Code, if the **Allow for Components** box is not checked in the **UPC Options**.

UCC Code and **Auto Next Number** are defaulted to the **UPC Options** settings.

Click the **Auto** button to assign codes automatically to all the listed Items not having UPC Codes yet.

If the **Allow Only Selected Type** box is cleared in the **UPC Options**, any valid UPC Code may be entered. The length

can be 12, 13 or 14 digits. If the entered UPC Code is 13 or 12 digits long, the program adds one or two zeroes correspondingly to the beginning of the Code. The Checking Digit is checked to be valid. If the Use UCC option is set in the UPC Options, you may enter only Item Reference (the length must correspond to the Options). In this case the program will use the UCC Code and calculate the Checking Digit to form complete UPC Code.

When changing or deleting an Item through the **Delete and Change Items** program opened from the **Inventory Management Utilities** menu, the item will be respectively deleted or changed in UPC Master File.

ITF-14 Processing

If the **Generate ITF-14 Codes for U/M** option is enabled in the UPC Options the Tare Type column becomes available in the UPC Code Maintenance grid allowing the user to specify the type of package
ITF-14 codes are all 14 digits. The first digit describes the type of package. There are no official restrictions on values 1 through 7 other than the contents must have the same UPC indicated by the container symbol. The following codes are used by convention:

0. UPC code of contents differs from case code
1. More than each and below inner packs
2. Alternative for 1
3. Inner packs
4. Alternative for 3
5. Shipping containers (cartons)
6. Alternative for 5
7. Pallet
8. Reserved by Uniform Code Council for future use
9. Variable quantity content

Only the following types are supported by UPC enhancement:

- 3. Inner packs**
- 5. Shipping containers (Case)**
- 6. Alternative for 5 (Master pack)**
- 7. Pallet**
- 9. Variable quantity content**

Based on these values the generated UPC codes will consist of the ITF code prefix (3, 5, 6, 7 and 9) indicating the package type added the master UPC code (the UPC code of the Item's Sales U/M) minus the check digit.

Item Code	Unit Of Measure	Tare Type	UPC
-----------	-----------------	-----------	-----

For generating ITF-14 code it is necessary to select the Unit of Measure for an Item, specify the Tare Type from respective drop-down and press Auto or Assign UPC buttons. The program will generate the ITF-14 UPC code based on the Tare type for current line and respective master Item UPC Code.

The program allow only for entry of UPC code compatible for the specified tare type. The ITF-14 code can be generated only for the lines having Item master UPC code assigned, otherwise the following message appears:

The Item master UPC record cannot be deleted or changed if at least one UPC record is found for that Item with Tare Type specified.

The Next UPC Code logic is not applied for ITF-14 codes. In this case the program generates the ITF-14 code using the master UPC code and the Tare type schema instead of using the Auto Next No.

The Lot/Serial number column is not available if ITF-14 processing is enabled.

Item Maintenance

The **UPC** field and the **UPC Code Maintenance** button have been added to the **Main** tab of the **Item Maintenance** screen.

The **UPC Code** button allows processing **UPC Codes**.

UPC Code Processing

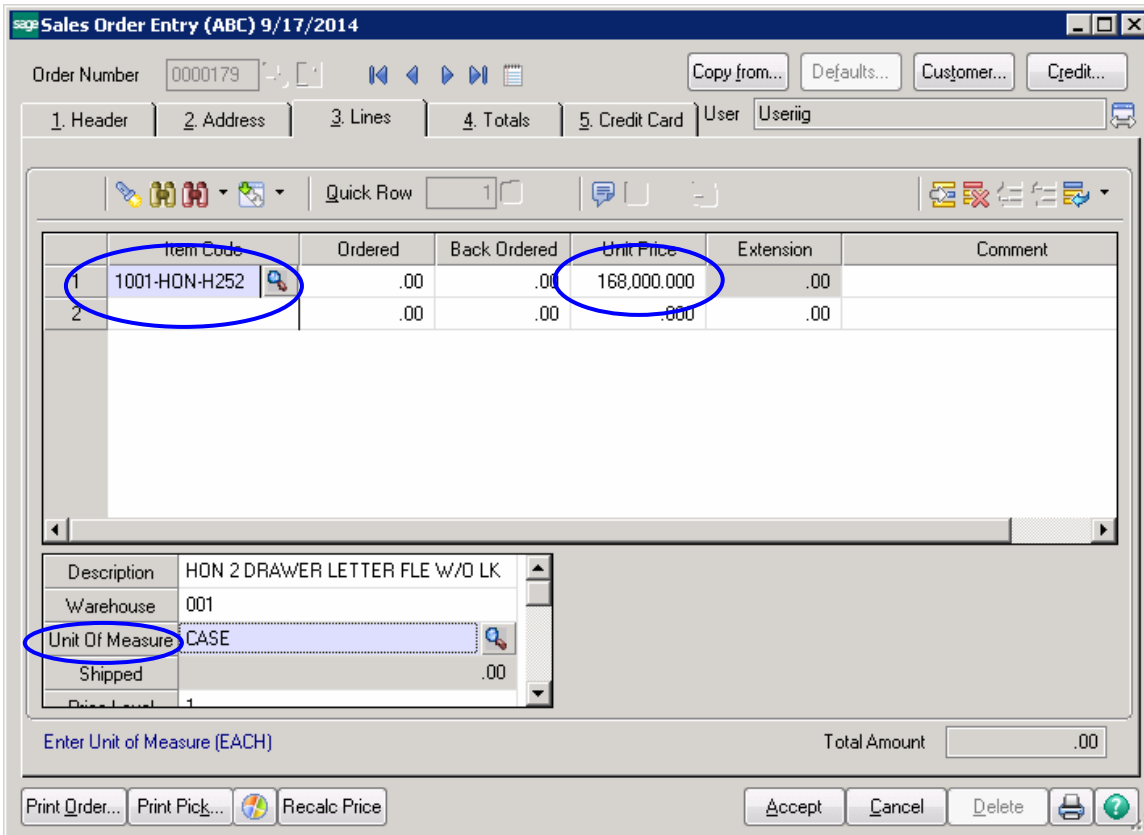

Sales Order Entry

The **Sales Order Entry** program displays the **Item Code**, **U/M**, and **Unit Price** when entering a **UPC Code** of an item in the **Item Code** field on the **Lines** tab.

Enter/scan the **UPC Code** for an item.

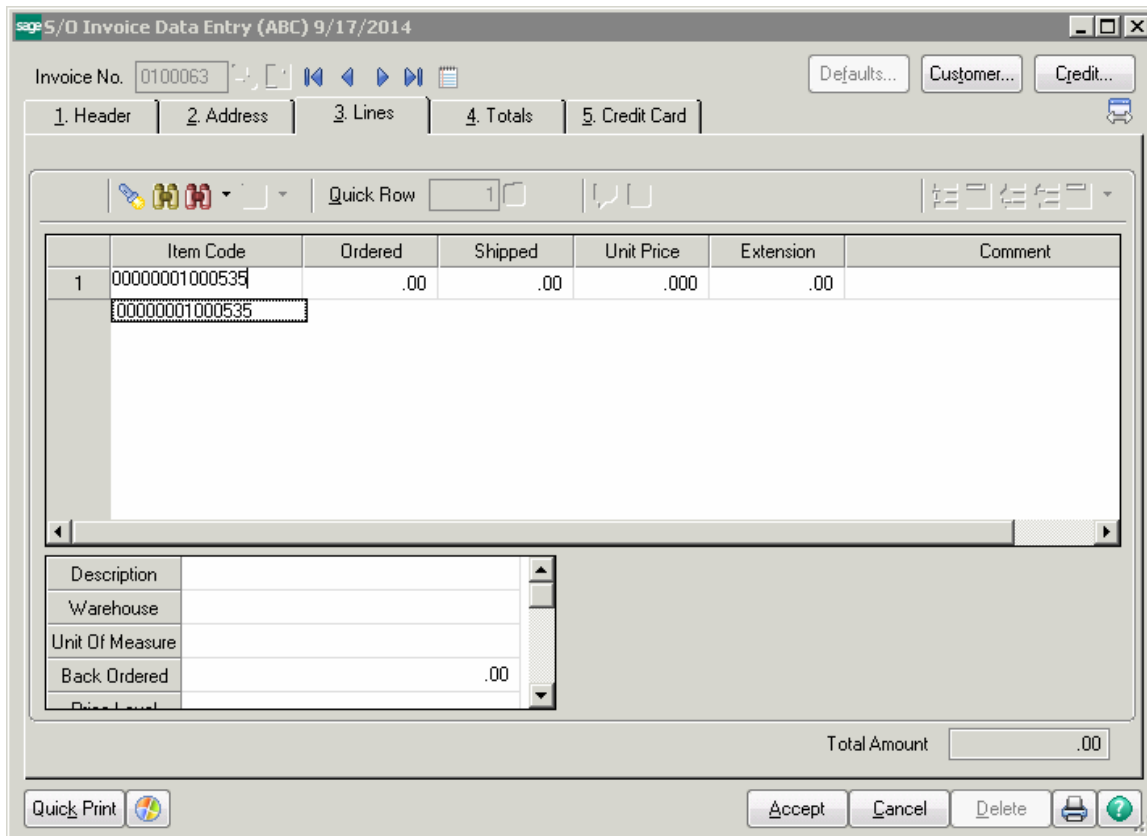

The corresponding Item Code, Description, U/M (associated with that UPC Code) and Unit Price will be displayed.

Invoice Data Entry

The **Invoice Data Entry** program displays the **Item Code**, **U/M**, and **Unit Price** when entering a **UPC Code** of an item in the **Item Code** field on the **Lines** tab. Enter the **UPC Code** for an item.

The corresponding Item Code, Description, U/M (associated with that UPC Code) and Unit Price are displayed.

Shipping Data Entry

The **Shipping Data Entry** program has been modified to allow automatically selecting the line with an item coupled with a **UPC Code by U/M**, when entering that **UPC Code** in the **Item Code** field on the **Lines** tab.

Select **Order No.** containing the Line Item that has UPC Code assigned. When entering that UPC Code in the **Item Code** field, the line item, for which that UPC Code is set, will be automatically selected.

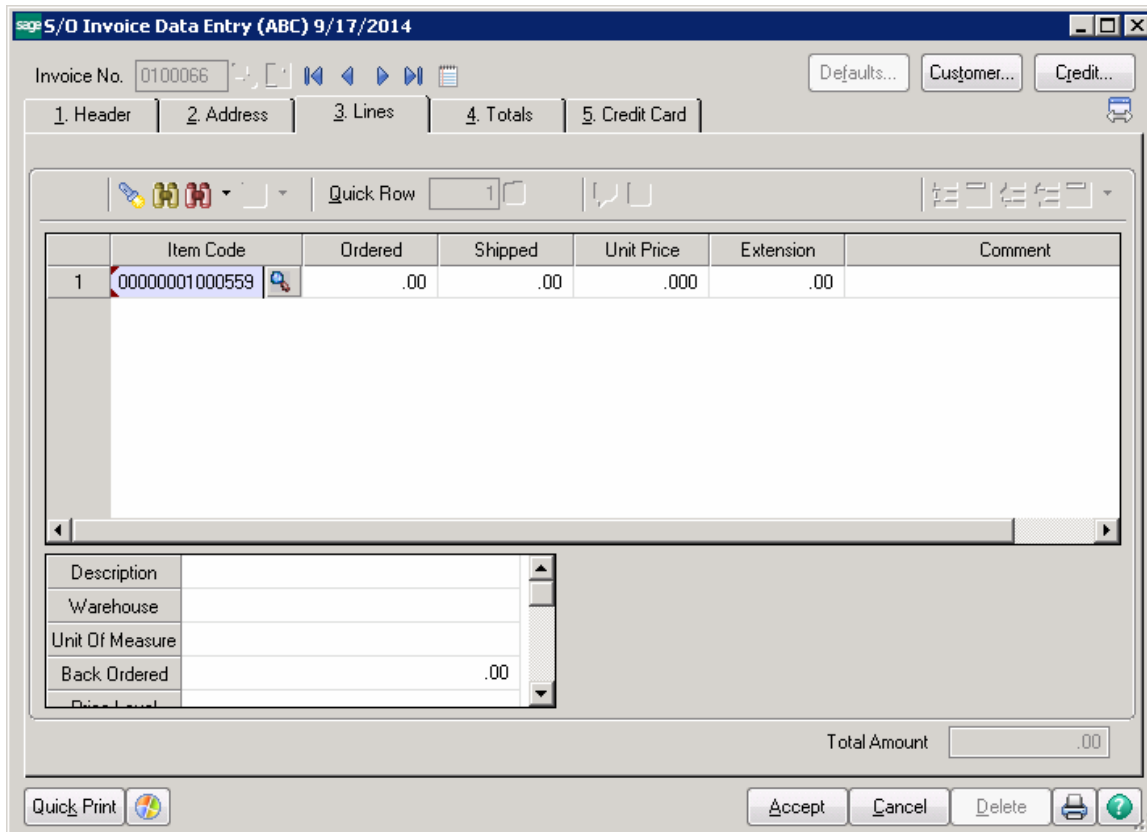

Selecting the **Auto Increment** check box will automatically increment the shipped quantity by 1 if the U/M of scanned/entered UPC code is matching with the U/M of the line. Otherwise the Auto Increment check box will not automatically increment the shipped quantity by 1 and the Quantity will be increased taking into consideration the U/M of the line and the conversion factor.

Note: If there is no U/M specified for the scanned UPC Code the Sales Unit of Measure from the Inventory Master file will be taken into account when increasing the quantity of the line.

For example, if the item is sold on the sales order as EACH, and the UPC code scanned for this item is for a 6PK (six pack), then the quantity incremented will be 6, which is the unit of measure conversion factor. This allows you to have a different UPC code for each item, the inner pack, the master pack, the pallet, and even a shipping container, yet be specific to the item. This way, the operator does not have to open the box to scan the items when they are sold in a case or master pack when there will be case or multiple cases shipped. An example would be an order for 240 widgets, sold as EACH, which are packaged as CS24 (24 per case) with a UPC code for this unit of measure. In this example, the operator would only have to scan 10 cases, not 240 items.

UPC Code Processing for Lot Items in Invoice Data Entry and Shipping Data Entry

If Lot Serial Number has been specified for a UPC Code in the **UPC Code Maintenance** program, when entering/scanning that UPC Code in the Item Code field of the Invoice Date Entry and Shipping Data Entry lines, Shipped quantity will be incremented by one and auto distribution will be done by the scanned Lot number. If in current warehouse there is not a lot number matching the scanned one, auto distribution will not be done and the Lot/Serial Number Distribution screen will popup.

UPC Code Processing for Serial Items

The **Sales Order, Invoice, Purchase Order, Receipt of Goods, Return of Goods, Material Requisition Issue, I/M Sales, Receipts, Issues and Transfers Transaction Entries** have been modified to enable UPC by U/M code scanning for Serial Items.

When a UPC Code by U/M is scanned for a Serial Item in the above stated entries the Quantity is automatically calculated based on the Item's Standard U/M and the U/M conversion factor.

For example in the Sales Order Entry when scanning the UPC Code by U/M (Box) for a Serial Item the Ordered quantity of 10 EACH (the Item's Standard U/M) is loaded.

Purchase Order Entry

The **Purchase Order Entry** program has been modified to display the **Item Number**, **U/M**, and **Unit Price** when entering a **UPC Code** of an item in the **Item Number** field on the **Lines** tab.

Enter the **UPC Code**. The corresponding Item Number, Description, U/M (associated with that UPC Code) and Unit Cost are displayed.

Transaction Entry

The **Transaction Entry** program under the **Main** menu of **I/M** module has been modified to allow automatically loading the **Item Number** when entering a **UPC Code** of that item in the **Item Number** field on the **Lines** tab. If a **U/M** is associated with a **UPC Code** in the **UPC Code Maintenance** that **U/M** will be loaded automatically.

Enter the **UPC** code. The corresponding Item Number, U/M (associated with that UPC Code) and other related information will be displayed.

sage Transaction Entry (ABC) 9/17/2014

Transaction Type: Receipts

Entry Number: 00000014

1. Header | 2. Lines

Quick Row: 1

	Item Code	Quantity	Unit Cost	Extension
1	1001-HON-H254LK	.00	523.500	0.00
2		.00	.000	0.00

Description	HON 4 DRAWER LETTER FLE W/ LCK
Costing	FIFO
Unit of Measure	PKG
Warehouse	000

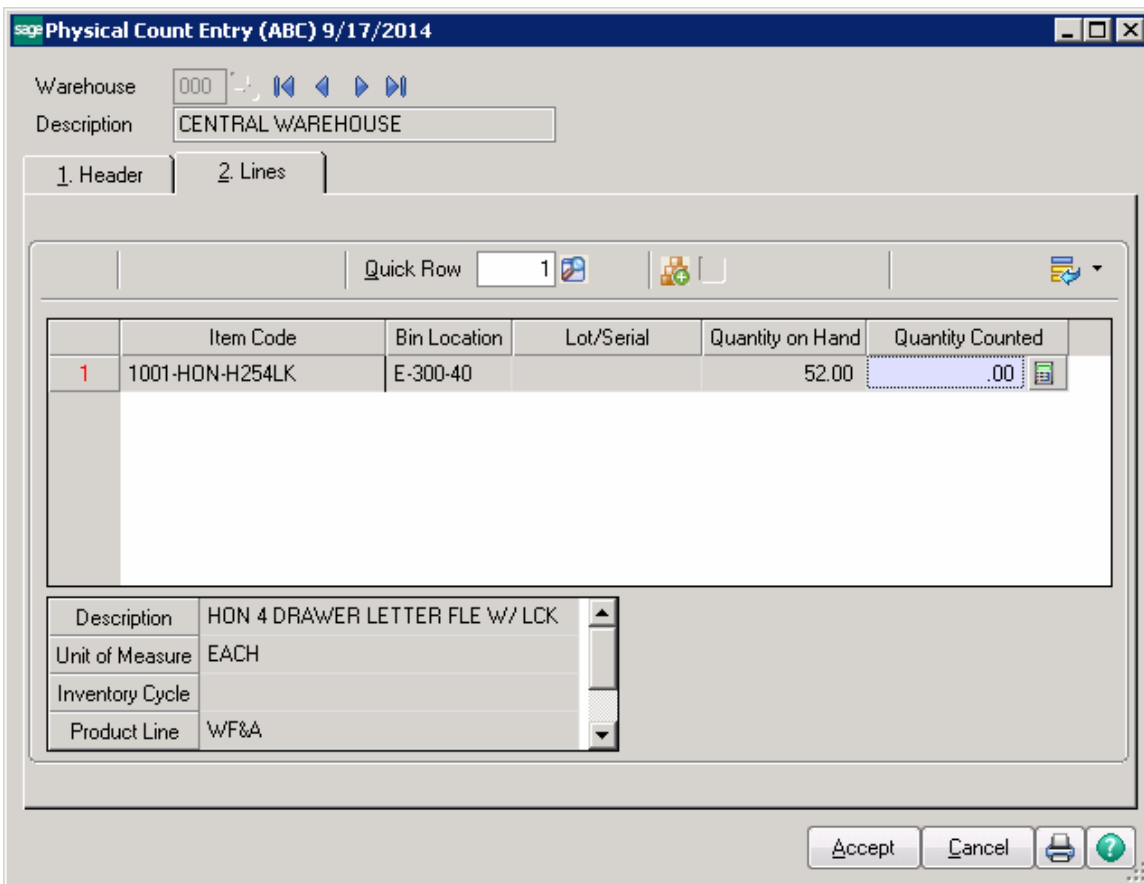

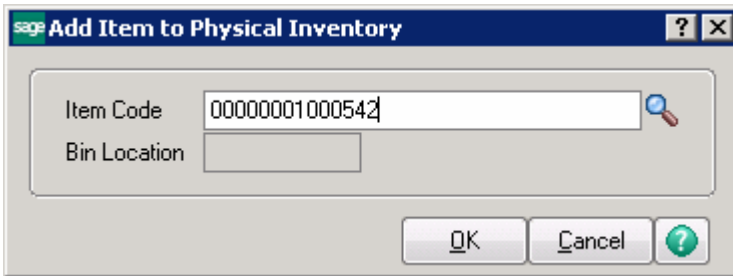

Enter Unit of Measure (EACH) Total Amount: .00

Accept Cancel Delete

Note: UPC processing works for all transaction types.

Physical Count Entry

The **Physical Count Entry** program under the **Physical** menu of the **I/M** module has been modified to allow automatically loading the **Item Code** when entering the **UPC Code** of that item in the **Item Code** field.

The Alias Numbers are also supported in the **Physical Count Entry** and **Transaction Entry**. When the Alias Number is entered in the **Item Number** field the corresponding item is loaded in the grid.

Note. If the UPC Code and the Alias Number of an Item matches, the preference is given to the Alias Number.

B/M Production Entry

The **B/M Production Entry** program has been modified to support **UPC Code** scanning on the Header tab. When the UPC code is scanned on the Header of the Production Entry the program translates it to the Item Code and automatically loads the lines of the items for the item you are building the kit for.

The screenshot shows the Sage Production Entry (ABX) 9/17/2014 window. At the top, the title bar reads "sage Production Entry (ABX) 9/17/2014". Below the title bar, there are navigation icons and two input fields: "Production Number" with the value "0000002" and "Batch" with the value "00002". A "Defaults..." button is located to the right of the Batch field. Below these fields are two tabs: "1. Header" (selected) and "2. Lines". The main area of the window is divided into several sections. The first section contains "Production Date" set to "9/17/2014" with a calendar icon. The second section contains "Bill Number" set to "D1400" with a magnifying glass icon and a list icon, and "Bill Type" set to "Kit". The third section contains "Revision" set to "000" with a magnifying glass icon, "Option Code" (empty), "Quantity" set to ".0000", "Unit of Measure" set to "EACH", and "Effective Date" set to "9/17/2014" with a calendar icon. The fourth section contains "Parent Warehouse" and "Component Warehouse" both set to "000" with magnifying glass icons, and "Explode Sub-Assemblies" checked with a blue checkmark. The text "Main Irvine Warehouse" is displayed next to both warehouse fields. At the bottom of the window, there are buttons for "Accept", "Cancel", "Delete", a printer icon, and a help icon.

The UPC codes are supported also for Component Items.

The UPC functionality is provided also in the **B/M Disassembly Entry**.

Inventory Label Printing

The UPC ITF-14 codes have been added to the inventory labels work file to enable generation of respective labels.
